Currently working at Huawei as a Data Analyst specializing in telecom operations, big data, and automation. Developed expertise in Python scripting, SQL optimization, and the Hadoop ecosystem (HDFS, CarbonDB) to engineer ETL pipelines and reporting systems for international projects.

Skills

Technical Skills: **Data Engineering:** Python, SQL (PostgreSQL, CarbonDB), Databricks, Dagster, Azure, AWS; **Data Tools:** Hadoop (HDFS), Linux/Bash, Docker, Git/GitHub, ETL; **BI & Reporting:** FineBI, FineReport, Framework UI, Google Sheets.

Soft Skills: Teamwork, Requirement Gathering, Client Communication, Fast Learner, Cross-functional Collaboration

Experience

Huawei - HRO (CEM Department)

Nov 2025 – Present

Data Analyst (Projects: Tanzania VDC, Malaysia U-Mobile, Indonesia, Ghana, Sierra Leone) Islamabad, Pakistan

- Designed and deployed complex end-to-end data pipelines for **PM, UDM, Nexus Automation and FWFA High-Potential Users on SmartCare Datacube**, transforming massive raw RF and XDR datasets into optimized production-ready SDR reporting layers.
- Analyze large-scale telecom network performance data within the **Hadoop ecosystem (HDFS, CarbonDB)** to optimize customer experience metrics and resolve critical 4G user spike issues.
- Developed and optimized production SQL scripts and **Bash/Cron automation**, reducing execution latency and improving database maintainability for monthly user profiling.
- Spearheaded behavioral analytics for Roaming and Silent users, utilizing custom **Key Quality Indicators (KQIs)** to identify network performance gaps and XKB delay trends.
- Architected real-time dashboards and visualization tools using **Dashboard 2.0, FineBI, and Framework UI**, translating complex network KPIs into data-driven "storytelling" for stakeholder decision-making.

Bytewise Limited

Jun 2024 – Sep 2024

Data Engineering Fellow

Remote, Pakistan

- Completed an intensive fellowship focused on end-to-end Azure data architectures, performing hands-on data modeling and normalization for Formula 1 and Tokyo Olympics datasets.
- Developed ETL pipelines using **Azure Data Factory** and **Databricks** for transformation, successfully loading processed data into **Azure Synapse Analytics** for downstream reporting.

O2linkx

Mar 2021 – Oct 2024

Business Analyst

Islamabad, Pakistan

- Spearheaded digital transformation for O2Linkx and partners by conducting requirement analysis and deploying strategic web solutions: HotBucks, ELI, L&L, QS, and SS-Sewing.
- Optimized digital assets through data-driven SEO strategies and backend customization, improving brand visibility and streamlining online business operations for diverse international clients.

Projects

Aircraft Sales Automation (Joy Aviation) | Rotabull API, Python, SQL, AWS EC2, Dagster, Google Sheets

June 2025 – Oct

- Architected an automated ETL infrastructure for aircraft parts sales, replacing manual entry with a pipeline extracting deal data from the **Rotabull API** into a normalized database.
- Designed and implemented **optimized relational schemas** and data models to structure aviation deal data, ensuring high data integrity and consistency across multiple sources.
- Orchestrated daily transformation workflows using **Dagster on AWS EC2**, automating data staging in Google Sheets to provide the US-based sales team with real-time operational visibility.
- Delivered a scalable solution that eliminated redundant manual tasks and significantly improved data accuracy for high-stakes aviation sales reporting.

Formula 1 Racing Data Pipeline | Azure, Databricks, Synapse, Python, SQL, Matplotlib

- Automated the entire data workflow using Azure Data Factory, Databricks, and Synapse Analytics.
- Implemented a multi-layered architecture: Raw (Data Lake Gen2), Curated (Databricks), and Query Layer (Synapse).
- Transformed raw JSON and CSV datasets using PySpark for efficient storage and querying.
- Enabled advanced race insights and performance analysis through Python visualizations using Matplotlib and Seaborn.

Education

National University of Modern Languages

2021 – 2025

Bachelors Degree in Computer Science (CGPA: 3.77/4.00)

Islamabad, Pakistan
